

# Frame Works

I used a couple of frame different thought-out my website these include:

- Material which I used for my slide show, which in future will display pictures of my projects.  
<https://daemonite.github.io/material/>
- I used font awesome also for my icons you see across my website  
<https://fontawesome.com/>
- I'm going to you google fonts to change my fonts of my titles to blend in more with the websites designs  
<https://fonts.google.com/>
- You can see the use of the bootstrap framework across my webpage, I used the bootstrap grid to lay out my Texts and photos aswell for my navigation bar. P.s a bootstrap life, is an easy life.

# Website Design

The website design I went for was modern/ keeping it simple.

I went for this design because I'm quite into these lighter greys/ browns, I wanted the user to get the feeling that they entered one of those dark lit coffee shops giving off a mature modern feel.

I wanted to keep it simple because life is to short, and so is the deadline.

I thought about what users appreciated about website, I read from this article below that users scan rather than read on websites so thats why I put in bold headers for each different section of my website, it helps the user visually seperate each section.

I wanted my users to have more control over my website, so in my nav bar I have anchor links to different segments of my webpage, so the user can quickly get across my website.

I also wanted the user to have some interactivity with my website so added the slide show in the future I'll update my projects onto the slide show. The slide show has features where you can click for next slide or hover over the image with your mouse and the slide show pauses on the image its on. I believe it makes this makes the website more visually pleasing for the user.

**Jesse Madison**

Here is the link of the article I read: <https://www.smashingmagazine.com/2008/01/10-principles-of-effective-web-design/>

I wanted to just keep I'm logo simple and straight forward, I used a website <https://www.freelogodesign.org/index.html> to generate my simple logo.
